

Handheld and Desktop Collection Solutions FOR JobOps

Accuracy—It's a Black and White Issue

How many parts were used, were made, are on the shelf? How many hours did that job require? There's only one right answer to these questions, and timely access to those right answers can make the difference in a competitive marketplace.

Perhaps no other function within your organization is as data-entry intensive as tracking the parts and labor associated with your jobs. Every point in the process where you rely on employees to write down or enter information manually is an opportunity for error. Duplication of efforts by paying staff to rekey data from timecards or job tickets is costly and wasteful. JOScan eliminates manual data entry tasks delivering immediate access to accurate, up-to-date information.

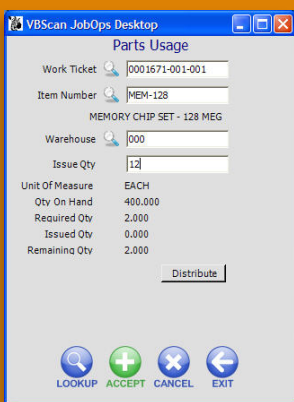

JOScan is a highly flexible, adaptable barcode data collection solution ideal for manufacturers and is optimized for JobOps. JOScan is easy and intuitive to use so your payback begins immediately, not after a lengthy training and implementation period. For accuracy, efficiency, and ease of use, JOScan delivers just what you need—when and where you need it.

JOScan is the handheld and/or desktop barcode scanning and data collection solution designed to allow manufacturers and field service organizations to minimize costs, maximize productivity and maintain a competitive edge in today's marketplace. JOScan integrates seamlessly with existing processes and is fully compatible with JobOps.

JOScan allows your warehouse, field service, or remote teams to capture labor, material, status¹, and time card² information and send that data into JobOps for update.

JOBOPS DATA COLLECTION SOLUTIONS
HANDHELD OR DESKTOP

Features Overview

JOScan for Labor Tracking

The JOScan Work Ticket Labor Tracking module puts the functionality of JobOps Time Tracker Time Entry anywhere you need it. Easily track the time spent on each step by scanning the employee number and the step of a job. JOScan allows you to track labor against jobs, it also allows you to track non-productive time and other costs including machine downtime, breaks, re-tooling, setup, and training. JOScan allows you to update your JobOps database from any computer or handheld and is faster, more efficient, and more accurate than handwriting time cards.

JOScan for Parts Usage

JOScan Parts Usage Tracking delivers the functionality of JobOps Time Tracker Parts Usage anywhere you need it. Track all parts used by step for a work ticket. Issue material to jobs, back into inventory from the job, use material not on the Work Ticket, or use alternate items. Simply scan the job and the part and collect the warehouse, the quantity, and lot or serial numbers, or if it is chargeable.

JOScan for Status Updates¹

JOScan Status Change component enables your team to update the status of steps throughout the manufacturing process. Change the status without creating a labor transaction.

JOScan for Time Card Tracking²

JOScan for Time Card Tracking allows you to collect payroll punch times and send that data to the JOScan database. Collect payroll punch in and out times and track break and lunch period punches. Collect and export data for use in Sage 100 ERP or to send to your payroll service provider.

Key Benefits

Fast and Accurate

- Immediate upload for JobOps via WiFi, LAN, or WAN.
- Scanned data is validated—whether connected to the network or not.
- Scanning minimizes data entry errors.
- Real-time data available to your manufacturing and operations team.

Cost Effective

- JOScan leverages JobOps and the Visual Integrator modules.
- Allows Field Service or Remote Installation teams to track inventory used and time spent on jobs and related field expenses to send back to the Work Ticket.
- Eliminates the need for duplicate data entry.

Highly Flexible

- Capture Material Usage, Labor Tracking, Status Change, and Time Card data.
- Communicate via HTTP when out of the range of your network.
- Supports lot and serialized items.
- Runs on ruggedized handhelds or existing workstations on the shop floor.
- Runs on SQL Server using an open database.

Large Choice of Handheld Devices

- Works with most mobile operating systems, including Windows Mobile and CE.
- Purchase handhelds from your preferred vendor or JDB Solutions Group.
- Supports XP, Vista, and Windows 7.

¹ This functionality requires the purchase of an additional JobOps enhancement.

² This data is not passed automatically to JobOps or the Sage 100 ERP Payroll module.

JDB Solutions Group specializes in manufacturing automation, including barcode scanning technology and equipment, process design, and consulting – specifically surrounding Sage 100 ERP and JobOps.

For more than a decade, we've been honing our skills and expertise in this area, working with Sage Authorized Partners and their clients to design, implement, and support effective and efficient manufacturing solutions. Our flagship products, WOScan and JOScan are highly flexible, adaptable barcode data collection solutions that work in concert with Sage ERP 100 (Sage MAS 90 and MAS 200) and JobOps. We also offer custom data integration services, allowing clients to leverage legacy or third party applications as part of an overall manufacturing solution.
