Time tracking solutions for workers on the go.

use virtually any phone

Telephone Login Plan

Use virtually any phone to create time entries, job tracking information and more. Simply call a toll free number, enter your time information and you're done.

The TimeForce Telephone Login Subscription Plan allows you to create time entries with virtually any telephone. You simply call a toll free number, enter your company number, card number and PIN (all numeric values, so it's easy). Then, you can create time entries, as well as department or job tracking entries. Time is based on the server time, with the ability to individually adjust offsets for the employee's actual time zone.

To access the time entries created using the telephone subscription plan, an administrative user logs into the TimeForce Phone Nexus web site (<http://telephone.qquest.com>) and downloads all punches to TimeForce. The administrator can also set up a schedule to automatically download the time punch data. The Phone Nexus website records the phone number (caller ID data) that was used to record the time punch data for each call.

Once the punches are in TimeForce, they act the same as any other time entry; time entries can be reviewed on screen, within reports, or exported to a payroll processing application or bureau.

Mobile NetClock

Allow your employees to clock in while out of the office using their web-enabled smart phones. The data collected flows seamlessly into TimeForce.

Works with most web-enabled smart phones and laptops such as modern cell phones, pocket PC-based phones, Treo® and Blackberry® phones.

Network Requirements: Normal connection to the internet (TCP/IP) through wi-fi or other network type.

The Mobile NetClock interface is easy to use. Track your time punch data while on the go.

REQUIREMENTS

The Telephone Login Subscription Plan does not have any other requirements besides what is required to use TimeForce.

The Mobile NetClock requires a compatible phone or device with internet access. It also requires the NetClock add-on module for TimeForce.

User Name	<input type="text" value="netclock"/>
Password	<input type="password" value="*****"/>
Company Code	<input type="text" value="testing"/>
<input type="button" value="Login"/>	

Simply log in using your phone.
